ETHYLENE CHLOROHYDRIN

UN 1135

Shipping Name: Ethylene chlorohydrin 2-Chloroethanol Other Names:

2-Chloro-1-ethanol Chloroethanol

- **WARNING!** POISON! BREATHING THE VAPOR, SKIN CONTACT OR SWALLOWING THE MATERIAL CAN KILL YOU!
 - Fire fighting gear (including SCBA) provides NO protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel

Hazards:

- Irritating to skin, eyes, nose and lungs at low concentrations
- Container may BLEVE when exposed to fire
- Vapors are heavier than air and will collect and stay in low
- Vapors may travel long distances to ignition sources and flashback
- Vapors in confined areas (e.g., tanks, sewers, buildings) may explode when exposed to fire
- Combustion products include the toxic phosgene gas and hydrogen chloride gas

Awareness and Operational Level Training Response:

- Do not put yourself in danger by entering a contaminated area to rescue a victim
- Stav upwind and uphill
- Determine the extent of the problem
- Isolate the area of release and deny entry
- Remove all ignition sources
- For container exposed to fire evacuate the area in all directions because of the risk of BLEVE
- Evacuate the immediate area and downwind for a large release
- Notify local health and fire officials and pollution control agencies
- If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated water

Description:

- Colorless liquid
- Sweet, ether-like odor
- Soluble in water
- Very flammable
- Vapors are heavier than air and will collect and stay in low

Operational Level Training Response:

RELEASE. NO FIRE:

- Stop the release if it can be done safely from a distance
- Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release
- Use large amounts of water to disperse vapors contain runoff
- Consider the application of alcohol resistant (AFFF) foam to spilled liquid to control vapors
- Ventilate confined area if it can be done without placing personnel at risk

FIRE:

- Specially trained personnel operating from a safe distance can fight fires using alcohol resistant (AFFF) foam or dry chemical if available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Keep exposures cool to protect against re-ignition. Do not direct straight streams into the liquid.
- Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely
- If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors or shows any signs of deforming), withdraw immediately to a secure location

First Aid:

- Do not put yourself in danger by entering a contaminated area to rescue a victim
- The contaminated victim poses a health risk to the responder
- Decontaminate the victim from a safe distance with a stream of water; have the victim remove clothing if possible: provide Basic Life Support/CPR as needed
- Further decontaminate the victim as follows:
 - ♦ Inhalation remove the victim to fresh air and give oxygen if available
 - Skin remove and isolate contaminated clothing (including shoes) and wash skin with soap and large volumes of water for 15 minutes
 - Eve rinse eves with large volumes of water or saline for 15 minutes
 - Swallowed do not make the victim vomit
- Victims should be examined by a physician as soon as possible
- Toxic effects may be delayed

CAS: 107-07-3
